

Stress free from today's technology

In today's climate of ultra-competitive golf tournaments on all corners of the globe, every player is trying to find that extra edge to turn a top 10 finish into a valuable win.

Many switch putters, try new drivers, hit new balls and in more severe cases alter their grips, stance, mental approach or superstitions in search of a better way. However, an increasing number have turned to the benefits of a piece of technology to try to enhance their performance and function more often in that place all elite sportspeople are striving for: 'The Zone.'

The basis of QLink's technology comes from the recognition of minute energies affecting the body that vibrate with each other and represent the most elementary form of energy. When the body is exposed to outside energies from such devices as mobile phones and computers, it places stress on the body's energies – stresses the QLink effectively intercepts. It communicates with your body's own energy, which itself becomes more refined, clarified and strengthened so when you are put under stress, the body can cope more effectively.

This can all sound a little confusing so the best way to view the QLink is as a barrier to outside stresses (electricity, radio-magnetic waves etc.) that enables the body to function at peak capacity while the QLink is being worn.

Golfers including Corey Pavin, Per-Ulrik Johansson, Gary McCord, Tom Pernice Jnr and Carin Koch have made personal testimonials while Greg Chalmers, Mark Calcavecchia, Jesper Parnevik and Scott McCarron have also worn a QLink pendant during tournaments.

England's Steve Webster has said: "it really helped my mental side and made a huge difference to my concentration."

With more than 275 US PGA, European, LPGA, LET and Champions Tour players wearing a QLink, and Olympians Nathan Baggeley and Natalie Cook also on board, the technology behind QLink is gaining worldwide recognition.

The QLink comes in three styles and with a 100-day money back guarantee. For more information visit the website at www.qlink.com.au or call (02) 9664 8800.

Feeling fine

Feel Golf's high-performance wedges were born on tour and deliver unbeatable accuracy. The six-way tour patented sole grind enhances golfers' confidence from any lie. The clubfaces feature equal toe and heel surface area, which reduces its tendency to turn over. The cambered soles allow the clubs to glide through rough and bunkers – even off cart paths, while the sole design helps reduce skulls and fat shots. Feel Golf wedges are among the fastest growing wedges on tour and are designed to ensure each wedge has the same kickpoint, swingweight, total weight, length, balance point and frequency. For more information, phone (07) 5455 5590 or visit www.birdiegolf.com.au.

Pain relief

Is pain adding to your handicap? Whether it's arthritis in your hands, your "footy knee", your tennis elbow or a stiff neck, pain inevitably changes the way you play. Even minor pain can affect both your accuracy and distance.

Painezer is a new addition to the golf bag that gives instant pain relief to sufferers. It's a new piezoelectric version of a TENS (Transcutaneous Electric Nerve Stimulation) medical device. It stimulates release of your body's natural endorphins, giving safe, effective, speedy drug-free pain relief. Painezer has no leads or batteries and takes 30 seconds to administer and works in seconds, so you can apply just before hitting off and relief will last the whole round. For more information, phone 1800 221 220 or visit www.dataforlife.com.au.
